EXPERIENCE

Eplica , Inc.

June 2008 – Current

Web Developer [securetalent.com, eplicaservices.com, eastridgeinfotech.com, completerecycling.com, essentialdiscovery.net, wiredtalent.com, exclusivelylegal.com, therastaff.com, medresourcesstaffing.com, contractorsandbuilders.com, abbotstaffinggroup.com]

San Diego, CA

Sole developer for Marketing and Communications team responsible for development and maintenance of 15+ websites and several custom web applications.

- Participated in all phases of corporate website creation on a high paced team of creative professionals with continuous client involvement.
- Customized existing off-the-shelf ASP 3 job board software to fit the needs of the organization. Extended functionality with supplemental ASP.NET pages and C# libraries.
- Responsible for maintenance of organization's legacy ASP (VBScript) web sites and associated web application components.
- Designed and developed ASP.NET blog software using C#, SQL Server & XML that integrates Blogger.com published content within the client website.
- Communicated with clients regarding website features, requirements & support.
- Developed user registration components using ASP.NET, C# & SQL Server allowing for profile creation, document uploading and text search functionality.
- Responsible for Internet/Intranet related support tickets for the entire organization.
- Coordinated legacy website and database updates with IT team.
- Conducted web based and face to face training sessions demonstrating custom built web applications.
- Developed XML data export routines using C# that publish SQL Server data to Dice.com & Indeed.com.
- Developed SMTP e-mail code libraries and HTML template system for branding website generated communication.
- Developed online application component that uses wizard style navigation and includes e-signature and dynamic custom question input.
- Wrote integration software that retrieved one vendor's data (VCG, Inc) via Web Services SOAP calls and exported to another vendor (Clearview) via XML.
- Created and implemented version control and back up procedures.
- Coordinated search engine optimization strategies with search engine marketing manager.

Massif Media

March 2009 - Current

Contract Developer [www.tritech.com]

- Content management system website development for TriTech software systems.
- Developed ASP.NET forum software including an e-mail notification feature.
- Developed client portal user authentication scheme and associated C# logic.
- Created C# XML parsing functionality used to import existing forum/user data.
- Designed and built custom SQL Server database to house forum/user/web lead data.
- Conducted client training on content management system.

Adrylan Communications, Inc.

April 2005 – June 2008

Software Developer (www.eadms.com)

Temecula, CA

Architected and developed enterprise ASP.NET 2.0 web software for K-12 educators and assessment coordinators. The software allows users to create, administer and scan district wide assessments and receive live results using a sophisticated reporting engine.

- Developed supplemental ASP.NET 1.1 applications to integrate into existing ASP3 software
- Developed state management components using C# and SQL Server to enable ASP3 to ASP.NET integration
- Developed dynamic reporting engine including dynamic charting, PDF and Excel export, color coding and a saved reports feature
- Developed dynamic PDF components to export report data and assessment materials
- Responsible for publishing software updates, archiving previous releases and creating change log documentation
- Developed permissions scheme allowing users to share data and system objects
- Developed front end web form user interfaces using XHTML, CSS, JavaScript.
- Developed business and data logic layers that utilize SQL Server
- Developed error handling and bug tracking components
- Developed dynamic Ad hoc SQL query builder used to report on disparate data sources
- Responsible for creating new SQL Server data structures to support new software functionality
- Imported and manipulated raw data files into SQL Server using Microsoft Access
- Utilized object oriented concepts including objects, interfaces, encapsulation and inheritance when developing back end components
- Communicated with end users regarding software requirements, enhancements and support
- Responsible for testing release candidates prior to software updates using test cases and white and black box debugging techniques

Erickson-Hall Construction

February 2004 – February 2005
